BACKGROUND

ABOUT TECO

TECO Singapore provides a total solution of motors and drives ever since it was established in 1972.

TECO Westinghouse Motor Company comprises the experience of Westinghouse, a leader in the motor industry since 1888 and TECO, a multinational conglomerate with over 50 years of motor experience. TECO Singapore itself was established in 1972 and has also set-up subsidiaries in Thailand, Malaysia, Indonesia, Vietnam and India.

By realizing the potential for precision products, especially in electronic and electrical equipment, TECO embarked a foothold in Singapore and becomes a hub for manufacturing and distribution of Electric Motors for the entire South-East Asia since 1972. TECO Singapore has established overseas manufacturing facilities and offices in Thailand, Malaysia, Indonesia, Vietnam and India.

Today, TECO is the one of the top 5 motor manufacturers in the world. Our motors are widely deployed in the industrial sectors and government projects including Singapore Mass Rapid Transit (SMRT), Land Transport Authority (LTA), Public Utilities Board (PUB), Housing Development Board (HDB) and Jurong Town Council (JTC) and Changi Airport.

INTRODUCTION TO IEC 60034-30-1

Electric motor application in the industry consumes between 30% and 40% of the generated electrical energy worldwide. Improving efficiency of the complete drive system is therefore a major concern in the energy-efficiency efforts.

Many different energy efficiency standards for cage induction motors from different countries were already in use (NEMA, EPACT, CSA, CEMEP, COPANT, AS/NZS, JIS, GB and others) before IEC came up with an efficiency standard. It became increasingly difficult for manufacturers to design motors for a global market and for customers to understand differences and similarities of standards in different countries, therefore IEC 60034-30-1 was developed for global standards for easy reference.

IEC 60034-30-1: Efficiency classes of single-Speed, Three Phase, Cage-induction motor (IE-code)

As part of a concerted effort worldwide to reduce energy consumption, CO₂ emissions and the impact of industrial operations on the environment, TECO is committed to produce International Energy-Efficiency Class (IE) motors in order to reduce the energy consumed and in turn reduce greenhouse gas emissions. TECO's V-series are designed, manufactured and tested to meet latest European and International standard. The New V Series, which comprise of full range of Efficiency Classes IE1, IE2 & IE3 Motors.

WHAT DOES THIS STANDARD COVERS?

It specifies efficiency classes for single-speed, three-phase, 50Hz and 60 Hz, cage-induction motors that have:

- Rated Voltage above 50V up to 1000V;
- Rated Output Power between 0.12kW and 1000kW;
- Either 2, 4, 6 or 8 pole;
- Rated either duty type S1 (continuous duty) or S3 (intermittent periodic duty) with a rated cycle duration factor of 80% or higher;
- Capable of operating direct on-line;
- Rated for operating conditions in accordance with IEC 60034-1, clause 6.

INTRODUCTION TO SINGAPORE MINIMUM EFFICIENCY PERFORMANCE STANDARD (MEPS)

In September 2016, Singapore ratified the Paris Agreement and formalized its pledge to reduce its emissions intensity by 36% below 2005 levels by 2030 and stabilize its emissions with the aim of peaking around 2030.

RATIONALE & BENEFIT OF MEPS FOR MOTORS

- ✓ Transform the market towards more efficient motors
- ✓ Reduce total life-cycle cost for end-users
- ✓ Reduce energy use and greenhouse gas emissions

SCOPE OF MEPS IN SINGAPORE

Single Speed 3-Phase Induction Motors:

- 50Hz
- 2, 4 and 6 Pole
- Rated Output Power from 0.75 kW to 375 kW
- Rated Voltage up to 1,000 V
- Rated on the basis of continuous duty operation

EXCLUSIONS OF MEPS

- a) Motors specifically designed to operate
 - Where ambient air temperature exceed 60°C
 - In maximum operating temperature above 400°C
 - Where ambient air temperatures are less than -30°C for any motor or less than 0°C for a motor with water cooling
 - In potentially explosive environment
- b) Motors that operate wholly immersed in a liquid
- c) Multi-speed motors, brake motors and torque motors
- d) Motors that are completely integrated into a product where the motors' energy performance cannot be tested independently from the product (e.g. chiller compressor)
- e) Motors supplied exclusively to a 3rd party who will incorporate the motors into equipment that will be exported to other countries
